

# REFLECTIVE SIGNS

**COMMON USES:** Ideal in poorly lit areas and general night time conditions: Street Signs, Mining Sites, Warning, Warehouse, Alarm & Fire Signs etc..

FlameStop offer a range of reflective signs for a variety of installations. Our signs are printed on reflective vinyl or can be mounted on ACM to create a durable, high visibility, professionally finished solid sign. We can mount on other substrates upon request, such as foam, Corflute or Aluminium.

## About our reflective signs...

### What are reflective signs made from?

Our reflective signs are made from Class 1 or 2 reflective vinyl. They can be optionally mounted onto 3mm ACM sheeting. We can also mount onto other substrates.

### How are they printed?

We direct print both these signs using state-of-the-art UV-LED technology.

### What is the difference between the two types of reflective?

The first type with the least amount of fluorescence is 'engineer grade' Class 2 reflective. This reflective is also the cheapest.

The second type of fluorescent material is 'high intensity grade' Class 1 reflective. This contains three times the amount of reflectivity of engineer grade. This reflective uses prismatic technology to offer superior visibility when viewed at an angle.

### How do I install ACM signs?

Follow 'sticker installation' instructions for vinyl installations.

For mounted reflective, dependent on the location, surface and durability requirements, reflective signs can be installed using the following methods:

- Acrylic, foam or UHB double sided tape
- Silicone or construction adhesive (e.g. liquid nails)
- Direct mounted with any self tapping, button, rounded or flat headed screws
- Adhesive Velcro mounting
- Stand-off mounts

### Can I have holes/rounded corners?

Yes

### Do I need lamination?

Over laminating your reflective signs will help protect against scratches, harsh weather as well as extending UV life.

We would not however recommend laminating the reflective signs as it would directly impact the performance of the sign.

### What sizes can I have?

Any size, small or large, there are no limits.

### Can I have a custom shaped sign?

Yes, talk to your local representative for pricing.

### Are your signs double sided?

Our standard signs are printed single sided. We can provide double sided reflective signs for special orders if required.

### Are your reflective signs waterproof?

Yes, our signs can be exposed to water and wiped clean. (Chlorine may discolour signs over time).

### Do your reflective signs dent or warp?

If installed on posts they will only dent or warp if placed in a high wind area.

### Will the sign rust?

No

### Do your reflective signs come with any fixings or tape?

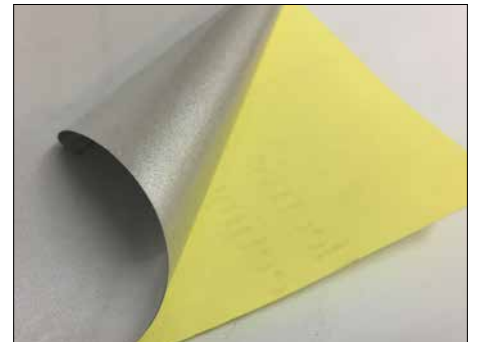

No, as we do not know where these signs are to be installed, no fixings or tape are included.

### Can I add my logo or contact info?

Yes, on customised sign orders.

Class 1 - High Intensity Grade Reflective

Class 2 - Engineer Grade Reflective

Polished and brushed standoffs available in 12mm

## GENERAL SIGNAGE FAQ.

### What type of signs do you make?

We can make most types of signs on a wide variety of materials.

### Can you make a customised sign?

Yes, just contact us with your specific requirements.

### Do you provide proofs?

Yes, once you place an order we can provide a proof.

### How much does it cost?

Each sign is different, the cost depends on materials used, print process and how many you want? We can quickly quote you.

### Do you install?

No sorry.

### Do your signs conform to standards?

Yes, specifications and colours for our signs and stickers are produced in accordance to AS1319:1994

### Can you print from my own artwork.

Yes we can print from your files (see 'Supplying Artwork Guide'). Note: conformity and compliance becomes client responsibility.

### I don't have any artwork.

Simple artwork is free of charge, more complex artwork may incur an artwork fee, you will be notified in advance.

### How quick can you produce my sign?

Most signs and stickers in our catalogue we keep in stock nationally. If your sticker is uncommon or customised allow 3-5 working days.

### How long do your signs last?

This highly depends on where the sign is installed. Indoors, out of direct sunlight minimum 5+ years. Outside in direct sunlight 1-3 years before the sign will start to fade. We can also laminate signs to protect and extend their life by an additional 1-2 years.

### Can you make signs same day?

Yes, we offer a same day turnaround and also a next day service, additional costs apply, speak to your local representative.

### Does your cost include GST?

No, please add 10% GST onto all prices.

### Does your cost include freight?

No, but we can provide a freight quote or you can collect direct.
